Innovations in Plant Health Management

Description

- 24% Liquid Calcium Carbonate

Features

- 4,800 mesh liquid lime product
- Easy to handle suspension liquid
- Economical alternative to conventional calcium amendments
- Can be applied through controlled irrigation systems or directly on soil surface

Benefits

- Builds soil structure by providing calcium.
- Small particle size promotes microbial activity.
- Increases water infiltration and soil flocculation.
- Improves root health through managing oxygen.

Rates & Timing

- Apply at 1-3 gpa according to soil type and calcium needs.
- Apply prior to important physiological events in plant.

Tank Mixing Considerations

- Do not mix with any phosphorus products.
- Consult with SBC representative for proper application rate.
